

Mechanic Repair and Overhaul

Experiences > 20,000 Jobs of Repair and Overhaul

“Repair and Overhaul” is required when a manufacturing or component either fails completely or when condition and performance monitoring equipment indicate that a measured component is outside of an acceptable performance range. Repair can be done in place or the affected equipment can be removed from the process and then repaired. Welding, machining, rebuilding, and replacements are several ways a machine can be repaired and returned to service.

Capability :

- We Repair and Overhaul more than 20,000 Jobs.
- Expert staff and Manpower skill.
- Great work shop area >2,000 m²
